## A truly all-round printing system

### Benefits

- High-quality printing
- Excellent reproducibility
- Reduces your printing costs
- Individual servomotor drive
- Choice of squeegee systems
- Machine widths from 1.6 to 3.2 m
- Many options to expand your printing possibilities

The Pegasus is an exceptionally versatile system that can meet even the most demanding requirements in textile printing. From short runs to high-volume batches, on many different types of substrate, the Pegasus guarantees absolute reproducibility and top quality - at low cost.

### Greater flexibility in squeegee use

One of the main advantages is the choice of squeegees. Blade or roller squeegees are all compatible with the Pegasus, and combinations of squeegee type enable even more flexibility in printing.

Another major attraction of the Pegasus is the individual servo-motor drive at each printing position. This gives you an extremely high degree of control, great accuracy and virtually error-free operation.

### Variety of widths

Depending on the Pegasus model, you can print on fabrics ranging from 1.6 m to 3.2 m in width. The stiff frame structure of the Pegasus

makes the system particularly suitable for printing on wide substrates.

### Expand your options

The functionality and performance of the Pegasus can be considerably extended through the extensive range of options. Many of these allow the Pegasus to increase operational efficiency still further, thus streamlining your printing and enabling better revenue generation. Various features significantly reduce the consumption of water and paste, which also contributes to lower operating costs. All in all, the Pegasus gives you unrivalled value in countless textile printing applications.

7

8

The Easy Detection package constantly monitors the tension on each screen and stops production instantly if a malfunction occurs.

#### Remote Diagnostics (7)

An on-line support package that provides you with rapid assistance in the event of a problem. Your system is linked via modem to technicians at our headquarters in Boxmeer, the Netherlands. Your equipment can therefore be analysed and, in certain cases, fixed remotely using software. As a safeguard to your business, Stork can only gain access to your system after you have authorised it.

#### Eco Friend

Save water and achieve better results when washing pipes and pumps by using the Eco Friend, a device that creates a swirling motion in the water and increases the washing effect.

#### Water Save

By using recycled rather than fresh water to wash the pumps and pipes, you can realise considerable savings in the volume of fresh water required, which subsequently lowers your operating costs. In addition, you also reduce environmental impact. Only a small amount of clean water is required for rinsing, and this water is used again for pre-washing.

#### Eco Recycle package (8)

Drastically reduce the amount of water required when using the blanket washer with the Eco Recycle package. It consists of a pump unit with filter that allows water in the blanket washer to be recycled. Clean water is only required for rinsing. The Eco Recycle, like Water Save, makes a significant contribution to lowering your operating costs.

9

#### Eco Paste return (9)

Save surprisingly large amounts of paste with the Eco Paste. This ingenious system removes unused paste from the squeegee by means of a small rubber ball which is forced along using air pressure and pushes any residual paste out of the squeegee and back into the storage container. The advantages, in terms of reduced costs and environmental friendliness, are self-evident.
